Overall Narrative

1

The story imtiazx.ai tells and why it matters

CORE IDENTITY

The story of a human who engineers AI.

imtiazx.ai is not a resume rendered as a website. It is a cinematic narrative about a person who sits at the intersection of three disciplines that rarely overlap: rigorous data science, production generative AI engineering, and responsible AI governance. The website tells this story in sequence, using scroll-driven visuals, curated content, and intentional design to communicate to its primary audience: senior engineers and hiring managers at product companies who have seen a thousand portfolios and remember none of them.

THE THREE-ACT STRUCTURE

Act 1: Origin and Capability

The hero section and projects section establish who Imtiaz is and what he builds. The visual is a glowing AI brain connected by energy to both a human hand and a robot hand. This metaphor is deliberate: Imtiaz bridges human intuition and machine intelligence. The brain transitions from the hero into the projects section, where 6 radial lines connect it to 6 project cards.

Act 2: Breadth and Perspective

The hackathons, identity, perspectives, and writing sections establish range. A racing humanoid figure signals competitive instinct. A reaching hybrid hand signals multidisciplinary capability. A writing hand signals articulation and public thought leadership. A thinking figure signals depth.

Act 3: Values and Worldview

The crypto/fintech section (What I Trade) and the Earth section close the narrative. The crypto section reveals a dimension most AI engineers lack: market intuition, ecosystem literacy, and risk management applied to real capital since 2018. The Earth section grounds everything in a larger worldview: technology in service of something beyond technology.

The Tagline

"I engineer AI systems from prototype to production."
This line lives in the hero and footer. It is precise, confident, and free of buzzwords. It anchors every section.

TARGET AUDIENCE

Primary Senior engineers at product companies	Secondary Hiring managers and technical recruiters	Tertiary Fintech and crypto-native companies
Tone register Premium, engineered, intentional	What they feel This person is serious and rare	What they do Save the URL and share it

0

2

Homepage Story Arc

Section order, scroll logic, and visual continuity from top to bottom

Homepage Section Order

The homepage is a single continuous scroll. Each section is a chapter. The narrative canvas overlays the scroll as a fixed-position PNG frame sequence, advancing with scroll position. The visual story and the content story run in parallel.

S1	Hero	Establish identity. Three lines. Philosophy. Two CTAs.	Brain + both hands. Orange glow. Dark panel.	Frames 001-050
S2	What I Build (Projects)	Show 6 projects with status, tags, and links.	Brain centers. Hands dissolve. 6 radial lines to cards.	Frames 051-100
S3	What I Compete In (Hackathons)	LangFlow 3rd place. Rogii Wellbore active.	Humanoid-AI figure racing. Motion blur. Dark track.	Frames 101-140 (future)
S4	What I Bring (Identity)	6 identity roles with descriptions.	Hybrid hand reaching up. 6 role labels float above.	Frames 141-170 (future)
S4b	What I Trade (NEW)	Crypto analysis narrative since 2018.	Hand holding Bitcoin/ETH/SOL coins. Holographic chart.	Frames 171-200 (future)
S5	What I Think (Perspectives)	5 perspective cards on AI and engineering.	Thinking figure from behind. Low light. No face.	Frames 201-230 (future)
S6	What I Write (Signal)	5 Hashnode articles with categories.	Hybrid hand writing on paper. Chart emerging.	Frames 231-260 (future)
S7	Earth	Worldview. Contact. Grounding.	Greenery, iceberg, atmospheric depth. GSAP Tux.	Existing + video layer

Scroll-to-Visual Logic

A fixed-position HTML5 Canvas element covers the full viewport at z-index 5 with pointer-events: none. On every scroll event, the canvas reads the scroll position relative to the active section boundaries and maps it to a frame index using:

```
progress = clamp((scrollY - sectionTop) / sectionHeight, 0, 1)
frameIndex = floor(progress * (totalFrames - 1))
```

The canvas fades out (globalAlpha to 0) over 80px of scroll past the section bottom, then sets display:none so it stops blocking interaction. On scroll back up, it restores. All frame images are preloaded on mount into an

HTMLImageElement array. The draw function uses cover-fit scaling to fill the canvas regardless of viewport size.

0
3

Section-by-Section Detail

Content, visuals, frame descriptions, and transitions for every homepage section

S1 -- Hero Section

Content

- Three identity lines in Geist Sans
 - "Data Scientist by origin."
 - "Generative AI Engineer by evolution."
 - "Forward Deployed Engineer by trajectory."
- Philosophy line: "I work at the intersection of AI research prototypes, production systems, and human chaos."
- Two CTAs: "View the Lab" (brand orange) + "Read Signal" (ghost)
- Scroll hint: "scroll to explore" in JetBrains Mono, 11px, muted, fades out after 10% scroll progress

Layout

- Two columns: left = identity text, right = visual canvas
- Right column is empty DOM -- canvas overlays it visually
- Dark gradient scrim behind text: `rgba(0,0,0,0.55)` left to transparent
- Section background: dark panel `#0A0A0A`

Visual (PNG Frame Sequence)

- Frames 001-050 of s1-s2 sequence
- Glowing orange wireframe brain at right-center
- Human hand reaching from far left, index finger extended
- Robot/mechanical hand reaching from far right, index finger extended
- Orange energy arcs connect both fingertips to brain surface
- Circular ripple HUD rings at each connection point
- Deep black background `#0A0A0A`
- No floor shadow in later frames -- shadow present in frame 001 only

Transition to S2

- As scroll enters S2 range: hands retract left and right
- Energy arcs stretch, flicker, dissolve
- Brain drifts to horizontal center of frame
- Camera static throughout -- motion is subject-only

S2 -- What I Build (Projects)

Content

- Section heading: "What I Build"
- 6 project cards from `lib/projects.ts`
- Each card: name, subtitle, status badge, description, tags, links
- Status types: Production (teal), Development (orange), Ideation (amber)
- Filter by status and origin on /lab page (not homepage)

Project cards layout

Visual (PNG Frame Sequence)

- Frames 051-153 of s1-s2 sequence (current)
- Brain alone, centered, hands fully dissolved
- Orange glow radiates symmetrically outward
- Brain rotates slowly on Y axis

Code-drawn overlay (not in frames)

- 6 SVG lines drawn by NarrativeArrows component

- Grid: 2 columns on desktop, 1 on mobile
- Cards have position: relative, z-index: 10
- Cards render above the narrative canvas
- Dark scrim at section top: gradient #0A0A0A to transparent, 120px
- Lines radiate from brain center at 60-degree intervals
- Each line points toward its corresponding project card
- Lines animate in when scroll progress > 0.5
- Lines use --color-brand at 0.6 opacity
- Animated dots travel along each line (GSAP motion path)

S3 -- What I Compete In (Hackathons)

Content

- Section heading: "What I Compete In"
- Active: Rogii Wellbore Intelligence (#115 globally)
- Completed: LangFlow Global Hackathon (3rd place)
- Card format: competition name, rank/status, description, tech used
- Status badges: Active (pulsing orange dot) / Completed (teal)

Visual (Future -- Phase 2)

- PNG frame sequence: humanoid-AI figure running
- Human body, geometric robot/AI head with visor
- Motion blur on limbs, dark racing track background
- Orange glow on head/visor matching brand
- No floor shadow -- figure in mid-stride, floating drama
- Transition: figure slows to stop as scroll reaches S4

S4 -- What I Bring (Identity)

Content (6 identity roles from lib/person.ts)

- GenAI Engineer: RAG systems, agentic pipelines, LLM APIs, evals
- Responsible AI: bias auditing, safety evals, red-teaming, governance
- Data Scientist: statistical modeling, ML pipelines, experiment design
- System Designer: API architecture, latency/cost tradeoffs, infra
- AI Consultant: translating business problems to deployed AI end-to-end
- Technical Writer: deep-dive articles, open-source docs, public learning

Layout

- 6 role cards arranged in a 2x3 grid or horizontal scroll
- Role labels float above the visual using Framer Motion
- HTML overlay -- not inside the frame sequence

Visual (Future -- Phase 2)

- PNG frame sequence: close-up hybrid hand reaching upward
- Human skin on palm, circuit lines and metal on fingers
- Dramatic upward lighting, dark background
- Transparent PNG frames -- floats over page background
- Warm amber and orange light matching brand palette
- 6 role label strings float and rise above the hand
- Labels use --color-text-primary and --font-sans
- Transition: hand lowers, roles settle into cards below

S4b -- What I Trade (NEW SECTION)

NEW ADDITION

This section captures the crypto and fintech dimension of Imtiarz's background. Active since 2018, this narrative demonstrates market intuition, ecosystem literacy, and risk management -- skills that are rare in AI engineers and highly valued in fintech roles. It also establishes credibility with crypto-native companies and DeFi protocols.

Content

- Section heading: "What I Trade"
- Subheading: "On-chain since 2018. Six years of ecosystem research, risk analysis, and portfolio management across market cycles."

Three content pillars

- **Ecosystem Research** -- blockchain protocol analysis, tokenomics evaluation, red flag detection before investment
- **Portfolio Management** -- multi-market-cycle experience, bear and bull market strategies, risk-adjusted position sizing
- **Community and Reach** -- 2,000+ Twitter followers, regular analysis posts, public track record of calls

Featured projects engaged with

- Polymarket -- prediction market protocol, testnet feedback
- Aethir -- decentralized GPU compute network, early access tester
- Other protocols: reached out during testnet phases for feedback
- Present this as a "protocols I have shaped" panel

Visual (Future -- Phase 2)

- PNG frame sequence: humanoid hand holding crypto coins
- Hand is partially mechanical, partially human (consistent with S4)
- Coins: Bitcoin (gold), Ethereum (silver-blue), Solana (purple) floating above the palm
- Holographic price chart / candlestick visualization rises above coins
- Orange brand glow surrounds the scene
- Dark background consistent with other sections
- Transition: coins float upward and dissolve into chart lines

Placement decision

- Inserted between S4 (Identity) and S5 (Perspectives)
- Rationale: follows the "what I bring" narrative naturally
- Fintech audience sees this before the thinking/writing sections
- Does not interrupt the AI narrative arc

Navigation placement

- Homepage: section id="what-i-trade"
- Quick-nav icon: coin/chart icon from Lucide React
- Signal page: crypto analysis posts get a "Crypto" category tab
- About page: mentioned in bio and timeline

S5 -- What I Think (Perspectives)

Content (5 perspective cards from lib/opinions.ts)

- Card format: bold claim, 2-3 sentence elaboration
- Topics: AI autonomy, responsible AI, engineering philosophy, the future of human-AI collaboration
- Section background: fixed dark #1C1412 (existing, intentional)
- Cards use light text on dark background

Visual (Future -- Phase 2)

- PNG frame sequence: figure seated from behind or side angle
- Face not visible -- angle and low light conceal it
- Single dramatic light source from above-left
- Cinematic, contemplative mood
- Near-black background consistent with #1C1412 section bg
- Transition: figure dissolves into the writing hand of S6

S6 -- What I Write (Signal/Writing)

Content (5 posts from lib/posts.ts)

- Scaling GenAI from POC to enterprise production
- Deception and autonomy in LLMs -- a DeepSeek R1 study
- Pricing agentic AI -- a value-based framework
- ARC-AGI 2024 -- what 50% GPT-4o accuracy means
- Chunking strategies that affect RAG quality
- All hosted on Hashnode at blog.imtiax.dev
- "Read all on Signal" CTA links to /signal page

Visual (Future -- Phase 2)

- PNG frame sequence: hybrid hand (human + circuit) holding pen
- Writing on paper, chart lines emerging from the writing
- Warm desk lamp lighting, intimate and focused
- Transparent PNG frames over themed background
- Paper texture visible, chart is orange/amber colored
- Transition into Earth section: hand dissolves, greenery appears

S7 -- Earth Section

Content

- Section id="earth" -- scrolled to by Earth nav button
- Worldview statement from lib/person.ts
- Contact CTA: email link
- GSAP Tux animation scene (existing, preserved)
- Fixed dark background #0C1A0E (existing, intentional)

Visual

- Existing GSAP Tux scene retained as-is
- Background video loop layered behind Tux (Phase 2)
- Video: lush terrain, distant iceberg, atmospheric haze
- Golden or cool atmospheric light
- WebM loop, muted, autoplay, poster frame shown until loaded
- No frame sequence -- video loop only

04

New Section: What I Trade

Full specification for the crypto and fintech narrative section

RATIONALE

Most AI engineers have no financial market experience. Imtiaz has been actively analyzing and trading crypto since 2018 -- through two full bull-bear cycles. This is not a hobby footnote. It is a demonstration of the same skills that make a great AI engineer: pattern recognition under uncertainty, risk modeling, ecosystem analysis, and the discipline to manage positions across volatile conditions. For fintech employers, this section is the differentiator.

FULL CONTENT SPECIFICATION

Section header

"What I Trade"

"On-chain since 2018. Six years of ecosystem research, risk analysis, and portfolio management across every market cycle."

Three stat cards (top of section)

Active since 2018	Twitter following 2,000+	Market cycles 2 full cycles
Protocols tested 15+ testnets	Analysis format On-chain + fundamentals	Coverage L1s, L2s, DeFi, RWA

What I analyze -- three-column breakdown

- **Ecosystem Research:** Protocol whitepapers, tokenomics models, team backgrounds, VC backing, on-chain metrics, developer activity
- **Red Flag Detection:** Unsustainable APY structures, anonymous teams with no track record, token unlock schedules designed to dump on retail, liquidity pool manipulation patterns
- **Market Cycle Management:** Position sizing by conviction tier, stablecoin allocation in bear markets, DCA strategies across volatility regimes
- **Portfolio Construction:** Core (BTC/ETH), satellite (L1 challengers, L2s), speculative (early-stage protocols with testnet activity)
- **Community Analysis:** Twitter sentiment, Discord activity quality, governance participation rates as signal for protocol health
- **On-chain Data:** Wallet tracking, exchange flow analysis, large holder behavior, smart money wallet following

Protocols I have shaped (featured panel)

Polymarket

Prediction Markets

Prediction market protocol

Reached out during testnet phase. Provided UX feedback on market creation flow and resolution mechanisms. Active user since early access.

Aethir

DePIN / Compute

Decentralized GPU compute network

Selected as early tester during testnet. Evaluated node performance, staking mechanics, and compute marketplace UX. Provided structured feedback.

Twitter presence

2,000+ followers built through consistent, original analysis posts. Content includes protocol deep-dives, market structure commentary, and testnet experience reports. No copy-trading signals -- all original research. Link lives in lib/person.ts and appears in the What I Trade section and the About page.

5

Navigation System

Nav bar, all pages, routes, updated structure with What I Trade

NAV BAR (UPDATED)

The top navigation bar remains unchanged in structure. "What I Trade" does NOT get its own nav item -- the nav is already intentionally minimal. Instead, the crypto section is surfaced through three access points:

- **Homepage:** Section on the scroll journey, accessible via the quick-nav floating icon (coin icon)
- **Signal page:** A new "Crypto" category tab surfaces crypto analysis posts alongside existing categories
- **About page:** Bio paragraph and timeline entry mention the trading/analysis background with Twitter link

CURRENT NAV STRUCTURE (UNCHANGED)

Nav Item	Route	Type	Content
Lab	/lab	Page	Projects + Hackathons + Open Source tabs
Signal	/signal	Page	Articles + Perspectives + Crypto tabs (new)
Stack	/stack	Page	Tech categories with proficiency bars
About	/about	Page	Bio + social + timeline + Right Now
Earth	#earth	Scroll button	Homepage only, smooth scroll to Earth section

PAGE CONTENT DETAIL

/lab -- Lab

- Tab 1 -- Projects: all 6 projects with status filter (All / Production / Development / Ideation) and origin filter (Personal / Enterprise-inspired)
- Tab 2 -- Hackathons: active and completed, card format with rank badge
- Tab 3 -- Open Source: placeholder for future open source contributions

/signal -- Signal (updated)

- Tab 1 -- Articles: all 5 Hashnode posts with category filter (All / Technical / Responsible AI / Strategy / Research)
- Tab 2 -- Perspectives: 5 opinion cards from lib/opinions.ts
- Tab 3 -- Crypto (NEW): crypto analysis posts and protocol reviews, link to Twitter

/stack -- Stack

- 5 tech categories with proficiency indicators and usage notes
- Categories: LLM APIs, RAG and Retrieval, Agent Frameworks, Backend, Frontend and Viz
- Each item: name, proficiency bar, note on how it is used in real work

/about -- About

- Bio paragraph: background, Accenture responsible AI work, crypto since 2018 mention
- Social links: GitHub, LinkedIn, Hashnode, Twitter (all from lib/person.ts)
- Terminal CodeBlock: interactive terminal aesthetic showing career timeline
- Timeline: key career milestones from data science to GenAI engineering
- Right Now cards: current focus, active hackathon, latest post, current reads

06

Homepage Quick-Nav Feature

Left-edge floating icon navigator -- auto-hidden, section-linked

FEATURE OVERVIEW

A vertical strip of icons anchored to the left-center of the viewport. Auto-hidden by default -- invisible until the user moves their cursor into a 48px trigger zone on the left edge. On hover-in, the icons slide in from the left with a spring animation. Each icon represents one homepage section and clicking it smooth-scrolls to that section. This is distinct from the top navigation bar, which navigates to pages. This navigator moves within the homepage only.

BEHAVIOUR SPECIFICATION

Trigger and reveal

- Trigger zone: 48px wide strip on the left viewport edge, full height
- On mouse enter trigger zone: icons slide in from left, opacity 0 to 1
- Spring animation via Framer Motion: stiffness 300, damping 28
- Each icon staggers 40ms after previous
- On mouse leave the full panel (icons + trigger zone): slide back out
- Delay on hide: 400ms so accidental exits do not flicker

Active state

- The icon for the currently visible section is highlighted
- Highlight: --color-brand fill, slight scale up (1.15x)
- Determined by IntersectionObserver on each section
- Smooth transitions between active states as user scrolls

Icons and sections (Lucide React)

- Hero: Cpu icon (AI brain)
- What I Build: Layers icon (stacked projects)
- What I Compete: Trophy icon (hackathons)
- What I Bring: Briefcase icon (identity)
- What I Trade: TrendingUp icon (crypto/fintech)
- What I Think: MessageSquare icon (perspectives)
- What I Write: PenLine icon (signal/writing)
- Earth: Globe icon (earth section)

Tooltip

- Section name appears as a tooltip to the right of each icon on hover
- Tooltip uses --font-mono, 10px, --color-text-primary
- Tooltip fades in 80ms after icon hover

TECHNICAL IMPLEMENTATION

Component: components/ui/HomepageQuickNav.tsx

- position: fixed, left: 0, top: 50%, transform: translateY(-50%), z-index: 20
- Trigger zone: a 48x100vh invisible div at left: 0
- Icon panel: flex column, gap 16px, padding 12px 10px
- Panel background: rgba(0,0,0,0.6) with 8px blur backdrop-filter

- Border: 1px solid rgba(255,255,255,0.08) on right and top/bottom edges
- Border radius: 0 8px 8px 0 (left edge is flush with viewport)
- Each icon: 28px x 28px, Lucide React, strokeWidth 1.5
- Default color: --color-text-muted. Active: --color-brand
- Hover: --color-text-primary with cursor: pointer
- On click: window.scrollTo with behavior smooth to section offsetTop
- Hidden on mobile (viewport width < 768px)
- Respects prefers-reduced-motion: no slide animation, instant show/hide

07

Full Content Reference

All structured content across lib/ files

PROJECTS (lib/projects.ts)

RAGScope

Development

Retrieval evaluation harness | RAG, RAGAS, pgvector, FastAPI, LangSmith

Benchmarks 5 RAG strategies side by side using RAGAS metrics. Live dashboard shows faithfulness, latency, and context precision.

DocuAgent

Ideation

Multi-agent document intelligence | LangGraph, Claude API, Redis, WebSockets

Supervisor agent decomposes uploaded documents into tasks and routes to specialist sub-agents for clause extraction and risk annotation.

SafeScore

Ideation

Responsible AI evaluation toolkit | Responsible AI, Red-teaming, FastAPI, React

Red-teaming for deployed GenAI applications. Tests attack surface from system prompts, RAG pipelines, and agentic tool configurations.

LLM Observatory

Ideation

Production monitoring for LLM applications | Python SDK, FastAPI, TimescaleDB, Docker

Drop-in SDK and self-hostable dashboard capturing token usage, cost, latency p50/p95, and output quality over time.

GraphRAG Lite

Ideation

Knowledge graph enhanced retrieval | Knowledge Graph, NetworkX, Qdrant, Claude API, D3.js

Combines entity extraction, graph traversal, and vector search. Shows reasoning path behind every retrieved result.

PromptOps

Ideation

Prompt version control and A/B testing | FastAPI, PostgreSQL, Redis, React

Version control for prompts with built-in A/B testing and Claude-as-judge evaluation. Visual diff viewer.

WRITING POSTS (lib/posts.ts)

Category	Title
Technical	Scaling GenAI from POC to enterprise production

Responsible AI	Deception and autonomy in LLMs -- a DeepSeek R1 study
Strategy	Pricing agentic AI -- a value-based framework
Research	ARC-AGI 2024 -- what 50% GPT-4o accuracy means
Technical	Chunking strategies that affect RAG quality

IDENTITY CARDS (lib/person.ts)

Role	Description
GenAI Engineer	RAG systems, agentic pipelines, LLM APIs, production evals
Responsible AI	Bias auditing, safety evals, red-teaming, governance at scale
Data Scientist	Statistical modeling, ML pipelines, experiment design
System Designer	API architecture, latency and cost tradeoffs, infra patterns
AI Consultant	Translating business problems into deployed AI end to end
Technical Writer	Deep-dive articles, open-source docs, public learning

METRICS (lib/person.ts -- About page)

Years shipping production AI 4+	Enterprise GenAI studies 25+	Effort reduction delivered 75%
LangFlow global hackathon 3rd place		

08

Technical Implementation

Stack, frame system, scroll mapper, and Claude Code instructions

TECH STACK

Layer	Technology	Purpose
Framework	Next.js 14 App Router	Routing, SSR, image optimization
Styling	Tailwind CSS + CSS custom properties	Design tokens, theming
Animation	Framer Motion + GSAP 3.15	Scroll reveals, cursor, transitions
Audio	Howler.js + Web Audio API	Ambient, interactive, click sounds
Icons	Lucide React (SVG only)	All icons -- never emoji
Fonts	DM Serif, DM Sans, JetBrains Mono, Geist	Typographic system
Frame system	Native Canvas API (no Three.js)	PNG frame sequence player
Deployment	Vercel free tier	CI/CD from GitHub main branch

FRAME SEQUENCE SYSTEM

Current state (Phase 1 -- live)

- 153 PNG frames at 1672x941px
- Location: public/narrative/s1-s2/frames_clean/
- File naming: 0001.png through 0153.png
- Covers S1 (hero with hands) through S2 (brain alone)
- NarrativeCanvas.tsx renders via HTML5 Canvas API
- Scroll maps to frameIndex via linear interpolation
- Canvas fades out 80px past S2 bottom
- Preloaded on mount using HTMLImageElement onload callbacks

Phase 2 additions (future)

- S3: Racing humanoid figure -- ~96 frames
- S4: Hybrid hand reaching up -- ~72 frames
- S4b: Hand with crypto coins -- ~72 frames
- S5: Writing hand -- ~72 frames
- S6: Thinker figure -- ~60 frames
- S7: Earth video loop -- WebM, not frame sequence
- Each section gets its own frames_clean folder
- lib/narrative.ts extended with per-section config

HARD RULES (from CLAUDE.md -- never violate)

- Never use em-dashes anywhere in code, content, or comments
- Never use emojis anywhere
- Never hardcode content inside components -- all content from lib/
- Never invent new color values -- use CSS custom properties from globals.css only
- Run npm run build before considering any task complete
- Test all three themes (light, dark, system) after every UI change

- Test audio toggle in all three states after any audio-related change
- Verify prefers-reduced-motion disables all animation
- Two hardcoded bg exceptions: EarthSection #0C1A0E and PerspectivesSection #1C1412

NEXT IMPLEMENTATION TASKS IN ORDER

1	Fix NarrativeCanvas scroll and visibility bugs (canvas blocks content below S2)
2	Build NarrativeArrows component (6 SVG lines from brain to project cards)
3	Build HomepageQuickNav component (left-edge floating icon navigator)
4	Add What I Trade section to homepage between IdentitySection and PerspectivesSection
5	Add lib/crypto.ts with protocols, stats, and Twitter content
6	Add Crypto tab to /signal page
7	Update /about page bio to mention crypto background
8	Generate S3 images (racing figure) and video, extract frames
9	Generate S4 images (hybrid hand) and video, extract transparent PNG frames
10	Generate S4b images (hand with coins) and video, extract frames
